Output DataUnit

1. Copilot-style prompt to create a step. Create supplementary files if needed, fill in logic in 'execute' method of Step

2. Copilot-style prompt to create a step. Create supplementary files if needed, fill in logic in 'execute' method of Step

3. Prompt to create a link can be invoked during Step building stage by selecting a corresponding option. It creates data flow between specified steps.

4. Link steps. Can be invoked at any point when multiple steps are present. If linking Step2 to Workflow like in example, link connects Step2 from Workflow1 to Step1 of Workflow2.

Workflow2 acts as Step 3 in Workflow 1
